## Student Internship June 2022

As a part of NISER's Outreach activities, for the first time it has conducted a 15 days long internship program for school students ranging from standard 9th-12th. In this internship, they were assigned a laboratory of their choice where they learned about various activities and experiments that are conducted in a research lab. They also got an idea of what research is and how researchers work in a scientific atmosphere.

In these 15 days, each student spent their time learning about basic science, mathematics and social sciences. They were shown research laboratories, instrumentations, various experiments, etc.

On the last day of their internship, they presented their respective topics that they have learnt during the course of these 15 days. At the end of their presentations, they were awarded with certificates.

### CONTACTS

**Dr. Debasmita P. Alone**

Chairperson, Outreach Committee
